

## Challenge #4: Implementation of Favicon

Apply a favicon in your project.

The code is written according to the format and path of the file, since the name of the file is “pic” and is in png format the code is written like the one highlighted below:

```
<!DOCTYPE html>

<head>
  <title>Rikoshee</title>
  <link rel="icon" type="image/png" href="pic.png">
  <style>
    aside {
      height:150%;
      width: 90%;
    }
  </style>
</head>
```

The result of the added code for a favicon is shown like the picture at the right side:
