Challenge #1: Goal

Goals and Plan for My Website

GOALS:

- Create an artist website.
- To share and showcase the artist's artworks.
- To advertise the artist's works and gain commissions through the website.
- To have own page for artist's gallery/portfolio.
- Be able to apply my learnings from the w3school tutorials.

PLANS:

- The website title will be "Rikoshee"
  ```html
  <head>
    <title>Rikoshee</title>
  </head>
  ```
- The website will consist of home, contact, gallery/works, and commission menus. Here I will be using html `<a>` tag and other attributes like href.
- The homepage will consist of menus, links, and a little info about the artist.
- Use artist's own artwork image for the background, logos, and other functions that may be applicable.
- The commission page will consist of the artist's art styles, price lists, as well as, dos and don'ts. In this page I will be using the basic html elements like body, paragraph, and header, I will also include images in this page.
- The gallery page will consist of artist's works on specific styles using the html elements attributes `src`, `width` and `height` of `<img>` to specify the path and size information of the images.
- For the links, I will/might use different elements like ‹a›, and ‹images› or button as well as attributes like href, and `mailto:` to link to an email address.
- Apply all other html and css elements where applicable.
